

## SEMESTER- VIII

### **MIC-10: Complex Analysis**

#### Course Outcomes

After the completion of the course, the student will be able to:

- CO1:** Understand the significance of differentiability of complex functions leading to the understanding of Cauchy-Riemann equations.
- CO2:** Evaluate the contour integrals and understand the role of Cauchy-Goursat theorem and the Cauchy integral formula. Expand some simple functions as their Taylor and Laurent series.

MIC-10: Complex Analysis (4 credits) Full Marks-100		
Unit	Topics to be covered	No. of Lectures
1	Introduction to complex number and geometrical interpretation, algebra of complex numbers, functions of complex variables, limit of a complex function, continuity and uniform continuity, differentiability, Analytic and regular function, Cauchy-Riemann equation and its applications.	10
2	Exponential function, logarithmic function, Branches, trigonometric and hyperbolic functions, derivatives of functions, Definite integrals of functions, Contours, Contour integrals and its examples.	10
3	Complex integration, Cauchy's theorem, Cauchy's Goursat theorem (Statement only), primitives, Cauchy's integral formula, Cauchy's integral formula for the derivative of an analytic function, Morera's theorem.	10
4	Convergence of sequences and series, Taylor series and its examples; Laurent series and its examples, Absolute and uniform convergence of power series.	10
<b>TOTAL</b>		40
